

# SQL (Structured Query Language) in one page

Table of contents: [Database Manipulation \(CREATE, DROP DATABASE\)](#), [Table Manipulation \(CREATE, ALTER, DROP TABLE, Data Types\)](#), [Index Manipulation \(CREATE, DROP INDEX\)](#), [Data Manipulation \(INSERT, UPDATE, DELETE, TRUNCATE TABLE\)](#), [Select \(SELECT, FROM, WHERE, ORDER BY, GROUP BY, HAVING, Operators, Aggregate functions\)](#), [Alias, Join, UNION, SELECT INTO/IN, CREATE VIEW](#).

Database Manipulation																						
CREATE DATABASE database_name	Create a database	CREATE DATABASE My_First_Database																				
DROP DATABASE database_name	Delete a database	DROP DATABASE My_First_Database																				
Table Manipulation																						
CREATE TABLE "table_name" ("column_1" "data_type_for_column_1", "column_2" "data_type_for_column_2", ... )	Create a table in a database.	CREATE TABLE Person (LastName varchar, FirstName varchar, Address varchar, Age int)																				
	<table><tr><th colspan="2">Data Types</th></tr><tr><th>Data Type</th><th>Description</th></tr><tr><td>integer(size)</td><td rowspan="4">Hold integers only. The maximum number of digits are specified in parenthesis.</td></tr><tr><td>int(size)</td></tr><tr><td>smallint(size)</td></tr><tr><td>tinyint(size)</td></tr><tr><td>decimal(size,d)</td><td rowspan="2">Hold numbers with fractions. The maximum number of digits are specified in "size". The maximum number of digits to the right of the decimal is specified in "d".</td></tr><tr><td>numeric(size,d)</td></tr><tr><td>char(size)</td><td>Holds a fixed length string (can contain letters, numbers, and special characters). The fixed size is specified in parenthesis.</td></tr><tr><td>varchar(size)</td><td>Holds a variable length string (can contain letters, numbers, and special characters). The maximum size is specified in parenthesis.</td></tr><tr><td>date(yyymmdd)</td><td>Holds a date</td></tr></table>	Data Types		Data Type	Description	integer(size)	Hold integers only. The maximum number of digits are specified in parenthesis.	int(size)	smallint(size)	tinyint(size)	decimal(size,d)	Hold numbers with fractions. The maximum number of digits are specified in "size". The maximum number of digits to the right of the decimal is specified in "d".	numeric(size,d)	char(size)	Holds a fixed length string (can contain letters, numbers, and special characters). The fixed size is specified in parenthesis.	varchar(size)	Holds a variable length string (can contain letters, numbers, and special characters). The maximum size is specified in parenthesis.	date(yyymmdd)	Holds a date			
	Data Types																					
	Data Type	Description																				
	integer(size)	Hold integers only. The maximum number of digits are specified in parenthesis.																				
	int(size)																					
	smallint(size)																					
	tinyint(size)																					
	decimal(size,d)	Hold numbers with fractions. The maximum number of digits are specified in "size". The maximum number of digits to the right of the decimal is specified in "d".																				
	numeric(size,d)																					
	char(size)	Holds a fixed length string (can contain letters, numbers, and special characters). The fixed size is specified in parenthesis.																				
	varchar(size)	Holds a variable length string (can contain letters, numbers, and special characters). The maximum size is specified in parenthesis.																				
date(yyymmdd)	Holds a date																					
ALTER TABLE table_name ADD column_name datatype	Add columns in an existing table.	ALTER TABLE Person ADD Sex char(6)																				
ALTER TABLE table_name DROP column_name datatype	Delete columns in an existing table.	ALTER TABLE Person DROP Sex char(6)																				
DROP TABLE table_name	Delete a table.	DROP TABLE Person																				
Index Manipulation																						
CREATE INDEX index_name ON table_name (column_name_1, column_name_2, ...)	Create a simple index.	CREATE INDEX PersonIndex ON Person (LastName, FirstName)																				
CREATE UNIQUE INDEX index_name ON table_name (column_name_1, column_name_2, ...)	Create a unique index.	CREATE UNIQUE INDEX PersonIndex ON Person (LastName DESC)																				
DROP INDEX table_name.index_name	Delete a index.	DROP INDEX Person.PersonIndex																				
Data Manipulation																						
INSERT INTO table_name VALUES (value_1, value_2,...)	Insert new rows into a table.	INSERT INTO Persons VALUES('Hussein', 'Saddam', 'White House')																				
INSERT INTO table_name (column1, column2,...) VALUES (value_1, value_2,...)		INSERT INTO Persons (LastName, FirstName, Address) VALUES('Hussein', 'Saddam', 'White House')																				
UPDATE table_name SET column_name_1 = new_value_1, column_name_2 = new_value_2 WHERE column_name = some_value	Update one or several columns in rows.	UPDATE Person SET Address = 'ups' WHERE LastName = 'Hussein'																				
DELETE FROM table_name WHERE column_name = some_value	Delete rows in a table.	DELETE FROM Person WHERE LastName = 'Hussein'																				
TRUNCATE TABLE table_name	Deletes the data inside the table.	TRUNCATE TABLE Person																				
Select																						
SELECT column_name(s) FROM table_name	Select data from a table.	SELECT LastName, FirstName FROM Persons																				
SELECT * FROM table_name	Select all data from a table.	SELECT * FROM Persons																				
SELECT DISTINCT column_name(s) FROM table_name	Select only distinct (different) data from a table.	SELECT DISTINCT LastName, FirstName FROM Persons																				
SELECT column_name(s) FROM table_name WHERE column operator value AND column operator value OR column operator value AND (... OR ...) ...	Select only certain data from a table.	SELECT * FROM Persons WHERE sex='female' SELECT * FROM Persons WHERE Year>1970 SELECT * FROM Persons WHERE FirstName='Saddam' AND LastName='Hussein'																				
	<table><tr><th colspan="2">Operators</th></tr><tr><th>Operator</th><th>Description</th></tr><tr><td>=</td><td>Equal</td></tr><tr><td>&lt;&gt;</td><td>Not equal</td></tr><tr><td>&gt;</td><td>Greater than</td></tr><tr><td>&lt;</td><td>Less than</td></tr><tr><td>&gt;=</td><td>Greater than or equal</td></tr><tr><td>&lt;=</td><td>Less than or equal</td></tr><tr><td>BETWEEN</td><td>Between an inclusive range</td></tr><tr><td>LIKE</td><td>Search for a pattern. A "%" sign can be used to define wildcards (missing letters in the pattern) both before and after the pattern.</td></tr></table>	Operators		Operator	Description	=	Equal	<>	Not equal	>	Greater than	<	Less than	>=	Greater than or equal	<=	Less than or equal	BETWEEN	Between an inclusive range	LIKE	Search for a pattern. A "%" sign can be used to define wildcards (missing letters in the pattern) both before and after the pattern.	SELECT * FROM Persons WHERE FirstName='Saddam' OR LastName='Hussein'
Operators																						
Operator	Description																					
=	Equal																					
<>	Not equal																					
>	Greater than																					
<	Less than																					
>=	Greater than or equal																					
<=	Less than or equal																					
BETWEEN	Between an inclusive range																					
LIKE	Search for a pattern. A "%" sign can be used to define wildcards (missing letters in the pattern) both before and after the pattern.																					
SELECT column_name(s) FROM table_name WHERE column_name IN (value1, value2, ...)	The IN operator may be used if you know the exact value you want to return for at least one of the columns.	SELECT * FROM Persons (FirstName='Tove' OR FirstName='Stephen') AND LastName='Svendson'																				
SELECT column_name(s) FROM table_name ORDER BY row_1, row_2 DESC, row_3 ASC, ...	Select data from a table with sort the rows.	SELECT * FROM Persons WHERE LastName IN ('Hansen','Pettersen')																				
	Note:	SELECT * FROM Persons ORDER BY LastName																				

	<ul style="list-style-type: none"><li>• <b>ASC</b> (ascend) is a alphabetical and numerical order (optional)</li><li>• <b>DESC</b> (descend) is a reverse alphabetical and numerical order</li></ul>	<div>SELECT FirstName, LastName FROM Persons</div> <div>ORDER BY LastName DESC</div> <div>SELECT Company, OrderNumber FROM Orders</div> <div>ORDER BY Company DESC, OrderNumber ASC</div>														
<div>SELECT column_1, ..., SUM(group_column_name)</div> <div>FROM table_name</div> <div>GROUP BY group_column_name</div>	<div>GROUP BY... was added to SQL because aggregate functions (like SUM) return the aggregate of all column values every time they are called, and without the GROUP BY function it was impossible to find the sum for each individual group of column values.</div> <table><tr><th colspan="2">Some aggregate functions</th></tr><tr><th>Function</th><th>Description</th></tr><tr><td>AVG(column)</td><td>Returns the average value of a column</td></tr><tr><td>COUNT(column)</td><td>Returns the number of rows (without a NULL value) of a column</td></tr><tr><td>MAX(column)</td><td>Returns the highest value of a column</td></tr><tr><td>MIN(column)</td><td>Returns the lowest value of a column</td></tr><tr><td>SUM(column)</td><td>Returns the total sum of a column</td></tr></table>	Some aggregate functions		Function	Description	AVG(column)	Returns the average value of a column	COUNT(column)	Returns the number of rows (without a NULL value) of a column	MAX(column)	Returns the highest value of a column	MIN(column)	Returns the lowest value of a column	SUM(column)	Returns the total sum of a column	<div>SELECT Company, SUM(Amount)</div> <div>FROM Sales</div> <div>GROUP BY Company</div>
Some aggregate functions																
Function	Description															
AVG(column)	Returns the average value of a column															
COUNT(column)	Returns the number of rows (without a NULL value) of a column															
MAX(column)	Returns the highest value of a column															
MIN(column)	Returns the lowest value of a column															
SUM(column)	Returns the total sum of a column															
<div>SELECT column_1, ..., SUM(group_column_name)</div> <div>FROM table_name</div> <div>GROUP BY group_column_name</div> <div>HAVING SUM(group_column_name) condition value</div>	<div>HAVING... was added to SQL because the WHERE keyword could not be used against aggregate functions (like SUM), and without HAVING... it would be impossible to test for result conditions.</div>	<div>SELECT Company, SUM(Amount)</div> <div>FROM Sales</div> <div>GROUP BY Company</div> <div>HAVING SUM(Amount)&gt;10000</div>														
Alias																
<div>SELECT column_name AS column_alias FROM table_name</div>	Column name alias	<div>SELECT LastName AS Family, FirstName AS Name</div> <div>FROM Persons</div>														
<div>SELECT table_alias.column_name FROM table_name AS table_alias</div>	Table name alias	<div>SELECT LastName, FirstName</div> <div>FROM Persons AS Employees</div>														
Join																
<div>SELECT column_1_name, column_2_name, ...</div> <div>FROM first_table_name</div> <div>INNER JOIN second_table_name</div> <div>ON first_table_name.keyfield =</div> <div>second_table_name.foreign_keyfield</div>	<div>The INNER JOIN returns all rows from both tables where there is a match. If there are rows in first table that do not have matches in second table, those rows will not be listed.</div>	<div>SELECT Employees.Name, Orders.Product</div> <div>FROM Employees</div> <div>INNER JOIN Orders</div> <div>ON Employees.Employee_ID=Orders.Employee_ID</div>														
<div>SELECT column_1_name, column_2_name, ...</div> <div>FROM first_table_name</div> <div>LEFT JOIN second_table_name</div> <div>ON first_table_name.keyfield =</div> <div>second_table_name.foreign_keyfield</div>	<div>The LEFT JOIN returns all the rows from the first table, even if there are no matches in the second table. If there are rows in first table that do not have matches in second table, those rows also will be listed.</div>	<div>SELECT Employees.Name, Orders.Product</div> <div>FROM Employees</div> <div>LEFT JOIN Orders</div> <div>ON Employees.Employee_ID=Orders.Employee_ID</div>														
<div>SELECT column_1_name, column_2_name, ...</div> <div>FROM first_table_name</div> <div>RIGHT JOIN second_table_name</div> <div>ON first_table_name.keyfield =</div> <div>second_table_name.foreign_keyfield</div>	<div>The RIGHT JOIN returns all the rows from the second table, even if there are no matches in the first table. If there had been any rows in second table that did not have matches in first table, those rows also would have been listed.</div>	<div>SELECT Employees.Name, Orders.Product</div> <div>FROM Employees</div> <div>RIGHT JOIN Orders</div> <div>ON Employees.Employee_ID=Orders.Employee_ID</div>														
UNION																
<div>SQL_Statement_1</div> <div>UNION</div> <div>SQL_Statement_2</div>	<div>Select all different values from <i>SQL_Statement_1</i> and <i>SQL_Statement_2</i></div>	<div>SELECT E_Name FROM Employees_Norway</div> <div>UNION</div> <div>SELECT E_Name FROM Employees_USA</div>														
<div>SQL_Statement_1</div> <div>UNION ALL</div> <div>SQL_Statement_2</div>	<div>Select all values from <i>SQL_Statement_1</i> and <i>SQL_Statement_2</i></div>	<div>SELECT E_Name FROM Employees_Norway</div> <div>UNION</div> <div>SELECT E_Name FROM Employees_USA</div>														
SELECT INTO/IN																
<div>SELECT column_name(s)</div> <div>INTO new_table_name</div> <div>FROM source_table_name</div> <div>WHERE query</div>	Select data from table(S) and insert it into another table.	<div>SELECT * INTO Persons_backup FROM Persons</div>														
<div>SELECT column_name(s)</div> <div>IN external_database_name</div> <div>FROM source_table_name</div> <div>WHERE query</div>	Select data from table(S) and insert it in another database.	<div>SELECT Persons.* INTO Persons IN 'Backup.db' FROM</div> <div>Persons WHERE City='Sandnes'</div>														
CREATE VIEW																
<div>CREATE VIEW view_name AS</div> <div>SELECT column_name(s)</div> <div>FROM table_name</div> <div>WHERE condition</div>	<div>Create a virtual table based on the result-set of a SELECT statement.</div>	<div>CREATE VIEW [Current Product List] AS</div> <div>SELECT ProductID, ProductName</div> <div>FROM Products</div> <div>WHERE Discontinued=No</div>
